Description

UPA Cornice Adhesive 45 or 60 is a plaster-based adhesive designed for fixing and bonding cornice to plasterboard walls and ceilings. It can be used as masonry adhesive. For best results, UPA also recommends the use of Cornice Adhesive 45 or 60 with all other plaster cement and adhesive products available within the UPA product range.

Applications

The UPA Cornice Adhesive can be specially formulated to suit either 45 or 60 minute setting times as required.

- Apply the mixture along the length of both edges of the cornice. Applied mixture should be at least 100mm wide and continuous along the edges.
- Press cornice into position until cement holds.
- Remove excess mixture from the edges using a broadknife.
- Clean off any residue with damp sponge or brush.
- Larger and longer cornice may require temporary supporting nails to hold cornice in position.

Advantages

- Provides enhanced plaster adhesion to surfaces.
- Smooth easy application with a choice of setting times.
