

Drywall Compound

# Masonry Adhesive

A Smooth Application Used In The Adhesion Of Plasterboard To Masonry, Brick or Concrete Walls.

Specially formulated adhesive designed to fix plasterboard sheets to masonry, brick or concrete walls.

# Masonry Adhesive

## Description

UPA Masonry Adhesive is a specially formulated adhesive designed to fix plasterboard sheets to masonry, brick or concrete walls.

## Applications

- Important: Make sure container, tools and water are clean, and then pour the required amount of water into the container.
- Mixing ratio: approximately 2 litres of water with 3kg of UPA Masonry Adhesive.
- It is favourable to mix at the recommended ratio and to thicken it up during initial mixing if necessary. Soaking for 2-3 minutes prior to mixing will improve creamy texture.
- Do not mix longer than required, as this will shorten the setting time.
- Do not mix more UPA Masonry Adhesive than can be used in approximately 70-80 minutes.

## Advantages

- Water Based
- High Strength
- Easy to Apply
- Light Weight
- Non Shrinking
- Quick Setting
